14th October 2014_ BUDAPEST

9.30 am _5 pm

TRANSNATIONAL LAB and INTERNATIONAL PRESS CONFERENCE CEEM PROJECT – Central Environmental and Energy Management as a Kit for Survival

CEEM project promotes the adoption of **green technologies** by SMEs in the Central Europe area. It offered operational methods, good practices and the access for free to a new IT tool – called **3EMT** - for the **benchmark of the eco-energy performance of industries** across the EU. CEEM aims at matching environmental protection with business improvement.

The purpose of the **Transnational Lab** is to involve **decision makers & stakeholders** from 5 EU countries to develop a Transnational Strategy Document to:

- **highlight the findings** of the CEEM pilot action and feature some **best practices**;
- sketch out a proposal of Central Europe **common standards and indicators** to evaluate SMEs eco-energy performance;
- write a **roadmap for cleaner production** and more sustainable consumption attitudes in the Central Europe.

Further information: www.ceemproject.eu

*In the next weeks you will receive the **agenda** of the event and detailed information on **registration, travel and accommodation** in Budapest.*
